

# ■ Zero Noise Extrapolation Report

Experiment: **Random Circuit (2 qubits) ZNE**  
Generated: 2026-06-19 10:01:21

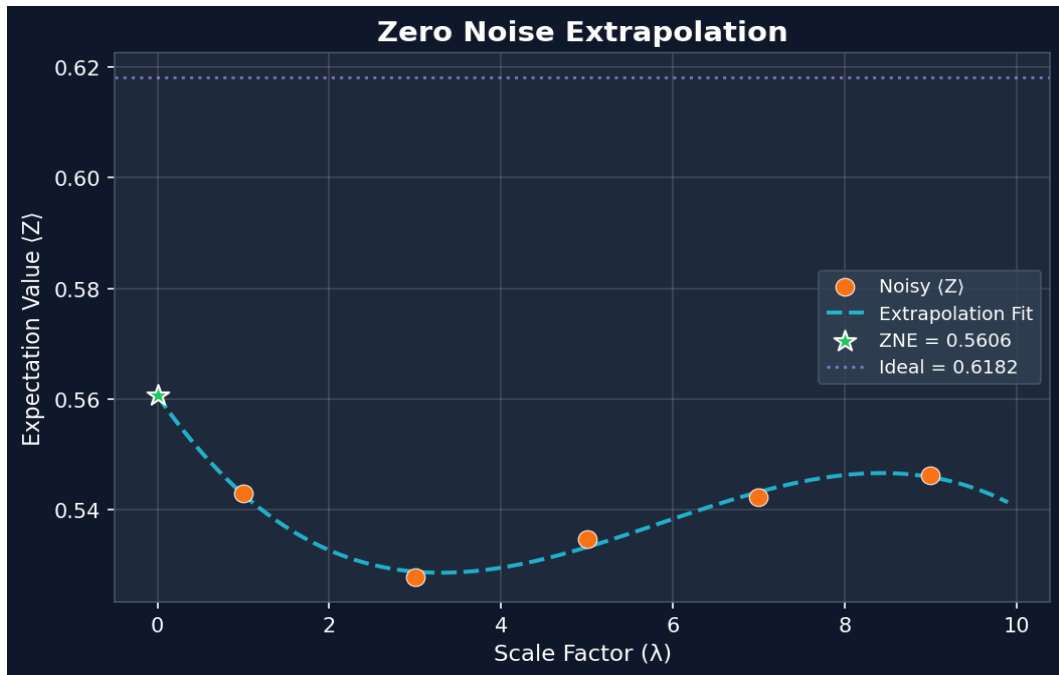

## Experiment Parameters

| Parameter        | Value           |
|------------------|-----------------|
| Folding Method   | Local           |
| Scale Factors    | [1, 3, 5, 7, 9] |
| Extrapolation    | Polynomial      |
| Noise Error Rate | 0.02            |
| Shots            | 8192            |

## Results

| Scale Factor                    | Noisy ■Z■ |
|---------------------------------|-----------|
| 1                               | 0.542969  |
| 3                               | 0.527832  |
| 5                               | 0.534668  |
| 7                               | 0.542236  |
| 9                               | 0.546143  |
| ZNE ( $\lambda \rightarrow 0$ ) | 0.560586  |
| Ideal                           | 0.618164  |

## Extrapolation Plot

## Circuit Code

```
from qiskit import QuantumCircuit
import numpy as np
qc = QuantumCircuit(2)
qc.rx(np.pi/4, 0)
qc.ry(np.pi/3, 1)
qc.cx(0, 1)
qc.rz(np.pi/6, 0)
qc.h(1)
```
